

MSC-A Unbalanced Mono Line to Balanced Mono Line Interface

The MSC-A has a passive, transformer isolated RCA jack and a 3.5mm jack for providing a unbalanced mono line to balanced mono (600 ohm) line interface in a single-gang decora style lexan plastic panel. The MSC-A provides an easy way to input mono audio signals from a variety of audio devices into an existing sound system. The module mounts into a standard single-gang electrical box (*not provided*), and is finished off using a matching decora coverplate (*see HPS-1*). Connections on the sound system side of the interface are made via screw terminals. Modules are available in Brown, Ivory or White.
