

## MSC-C Microphone Source Switch (lighted)

The MSC-C is a DPDT center-off switch used for switching two different amplified microphone signals. In addition to its' labeling, each switch position has a distinctive lighted green or red LED to indicate which source has been selected. The standard MSC-C comes labeled as Chapel and Local Microphone, but custom labeling is available. The module mounts into a standard single-gang electrical box (*not provided*), and is finished off using a matching decora coverplate (*see HPS-1*). Connections on the sound system side of the switch are made via pigtail wires. Modules are available in Brown, Ivory or White.
