

MSC-J Tape Record Jacks

The MSC-J has two transformer isolated (600 ohm) jacks for interfacing the record and playback functions into and out of an existing sound system. The interface is all contained in a single-gang decora style lexan plastic panel. The MSC-J provides an easy way to input mono line level signals from an existing sound system into a tape recorder, or input the recorded audio from a tape recorder into an existing sound system. The module mounts into a standard single-gang electrical box (*not provided*), and is finished off using a matching decora coverplate (*see HPS-1*). Connections on the sound system side of the interface are made via screw terminals. Modules are available in Brown, Ivory or White.
