

MSC-V 70.7V Volume Controls

The MSC-V is a volume control for use in 70.7V distributed sound systems. They are all built on a single-gang decora style lexan plastic panel, but require mounting in either a single-gang (25W, 50W & 100W), or double-gang (75W) electrical box depending on the wattage of the transformer. The volume control knob on each MSC-V module is color coordinated with the color of the panel. The modules mount into electrical boxes (*not provided*), and are then finished off using a matching decora coverplate (*see HPS Series*). Connections on the sound system side of the volume control are made via screw terminals on the 25W, 50W & 100W versions, and with pigtail wires on the 75W version. Modules are available in Brown, Ivory or White.
