

In-Wall Custom Chassis

easy installation

uses standard
masonry boxes

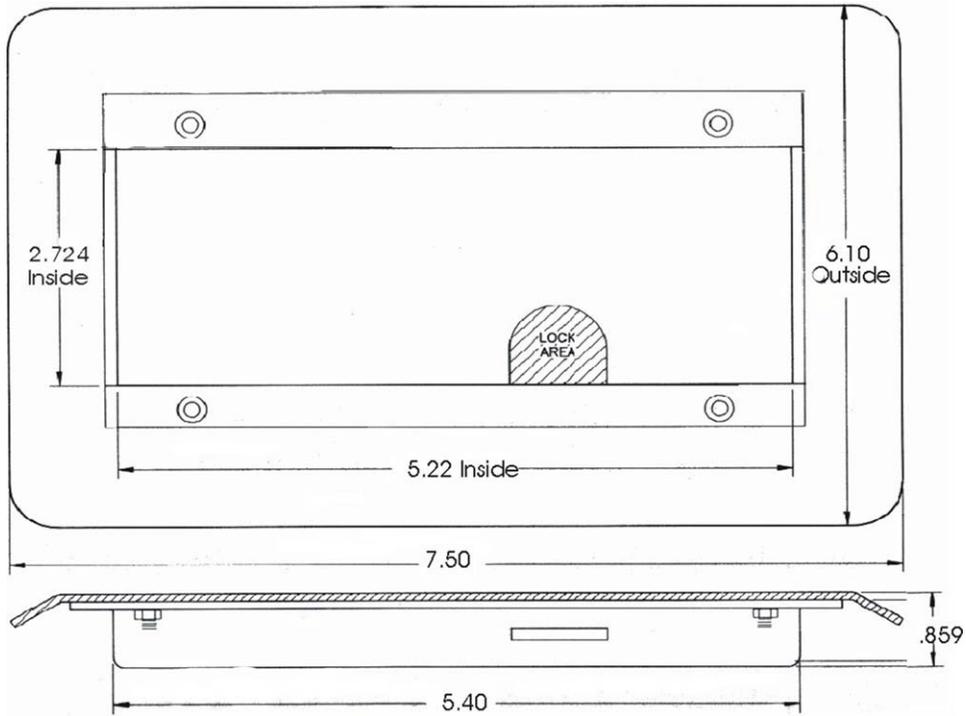

tough & rugged

professional appearance
for custom jobs

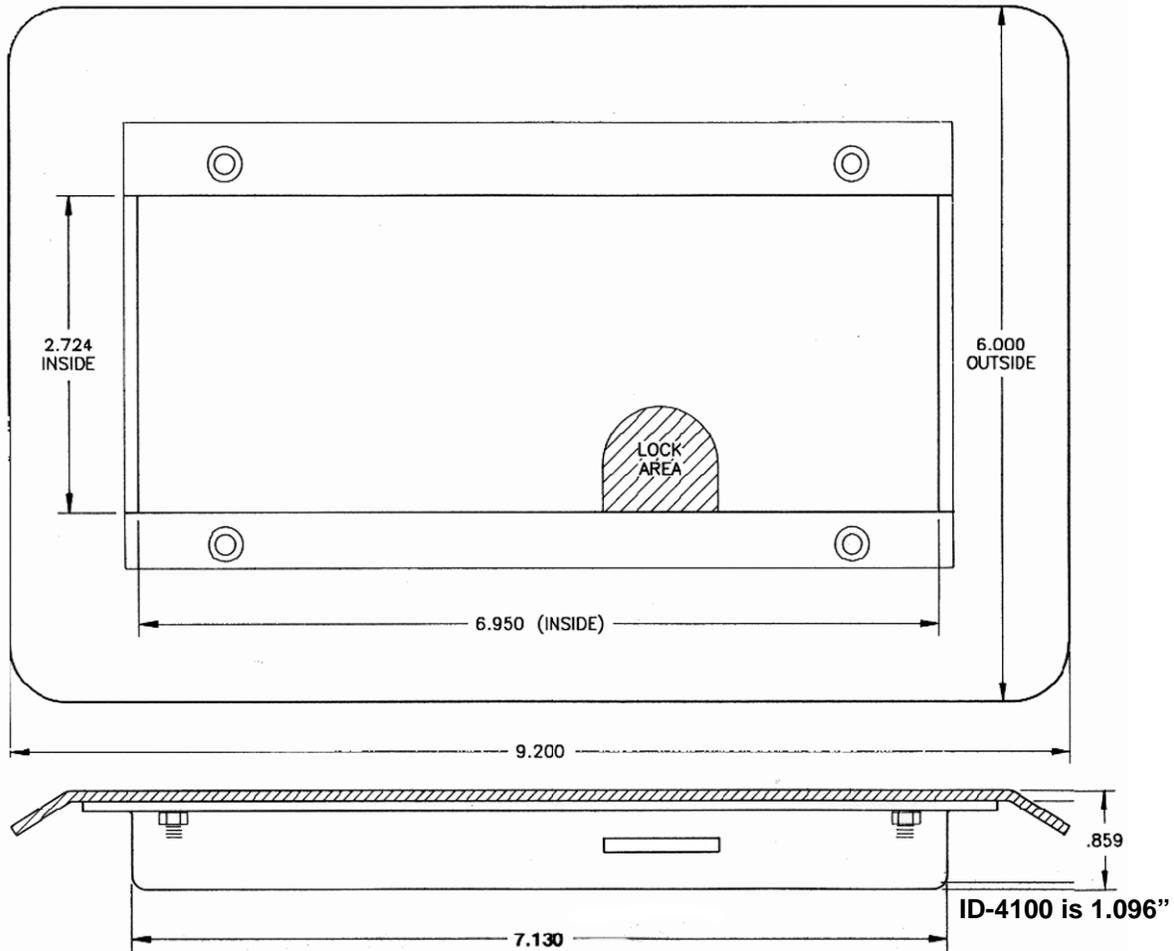

The IB and ID series of In-Wall boxes are designed for custom commercial installations. They allow a contractor to provide a professional look to their custom controls, such as volume controls, input and output jacks, and switches.

These In-Wall boxes are made of rugged .063" aluminum and are painted an off-white color. They are designed to mount into standard deep masonry boxes. The IB series of chassis' are .75" deep while the ID series is 1.00" deep. Each series features a removable locking door with either a keyed camlock or a thumbblatch camlock (optional).

The **IB-3100** is a 3-gang box that mounts into either a RACO 697, a BOWERS 3-MB, or equivalent, while the **IB-4100** and **ID-4100** are 4-gang boxes that mount into either a RACO 698, a BOWERS 4-MB, or equivalent. Shallower back boxes can be used depending on the depth of the controls and electronics that have to be mounted behind the IB or ID Chassis.
