

MSC-C

Microphone Source Switch (lighted)

The MSC-C is a lighted DPDT center-off switch used for switching between two amplified microphone signals. In addition to its' labeling, each switch position has a distinctive green or red LED to visually indicate which source has been selected. The standard MSC-C comes labeled as Chapel and Local Microphone, but custom labeling is available for no additional cost. The module mounts into a standard electrical box (*not provided*), and is finished off with a matching decora coverplate (*see HPS series*).

Connections on the backside of the switch are made via pigtail wires.

The MSC-C module is available in brown, ivory or white (*shown above*).
