

MSC-S

Microphone Source Switch (non-lighted)

The MSC-S is a DPDT center-off switch used for switching two separate amplified microphone signals. The standard MSC-S comes labeled as Chapel and Local Microphone, but custom labeling is available. The module mounts into a standard electrical box (*not provided*), and is finished off with a matching decora coverplate (*see HPS1*).

Connections on the backside of the switch are made via pigtail wires.

The MSC-S module is available in brown, ivory or white.
