

MSC-V10K

8 ohm Volume Control

The MSC-V10K is a volume control for use in 8 ohm distributed sound systems. The volume control consists of a high quality 10K potentiometer with a knob that is color coordinated with the color of the panel. The modules mount into standard electrical boxes (*not provided*), and are finished off with matching decora coverplates (*see HPS1*).

Connections on the backside of the module are made via a 3-pin euro style connector.

The MSC-V10K modules are available in brown, ivory or white.
