

## MSC-V

### 70.7V Volume Controls

The MSC-V is a family of volume controls for use in 70.7V distributed sound systems. They are available as 25W, 50W, or 100W modules. Please specify the wattage required when ordering. The MSC-V is built on a single-gang decora panel, and mounts in a single-gang electrical box (25W, 50W & 100W). The volume control knob on each MSC-V is color coordinated with the color of the panel. The modules mount into standard electrical boxes (*not provided*), and are finished off with matching decora coverplates (*see HPS1*).

Connections on the backside of the module are made via a 4-pin euro style connectors.

The MSC-V modules are available in brown, ivory or white.
